

24 MAY 2024

Spec Sheet for Lightweight Mutton Cloth.

Only Genuine Mutton Cloth is what we produce and sell. Our Mutton Cloth is made from 100% cotton and is knitted in one count (40 tex) to keep it uniform. The mutton cloth is knitted on a 8 gauge machine allowing yarn counts of up to 84tex to pass through the needles.

The twist on the yarn we use is less than the finer counts of yarn used for basic single knit fabrics, therefore allowing more absorbency and a softer feel. Our mutton cloth yarn in its raw state has not been waxed therefore the fibres of the yarn are softer and non-abrasive.

The knit on the fabric is very course and loose allowing water to penetrate through the fibres and not to flow on the top of the fabric making it very absorbent. Our mutton cloth has the ability to stretch to double its width allowing for packaging and wrapping around items such as meat and fish (Tuna) and other related products. Mutton cloth is a very versatile product and is used for general cleaning within the household and has many other industrial uses.

Our mutton cloth is a tubular knitted fabric of around 28cm in width and is easily cut to the required length when needed.

Our mutton cloth specs are over what's set by the SABS board of approval. The approximate length of the mutton cloth can be calculated by considering that every 100grams of mutton cloth is equal to 2 meters in length.

Each roll is individually shrink-wrapped and then packed into a polypropylene bag then stitched securely for delivery. Each Bag weighs +-16 Kilograms.

The contents per bag is as follows depending on the roll size:
Random Rolls – 2x per bag (+-16kg)
